

Is your Network meeting your service level objectives?
Is your response time meeting your end users requirements?

Network Assessment

A network assessment is a complete analysis of your companies existing infrastructure that accurately depicts just how well your network is meeting the business needs of your company.

Altara's Network Assessment Service will keep your investment in infrastructure running at its top performance level, while insuring that you have the capacity and foundation in place for trouble free growth.

Using a time tested and proven methodology beginning with an initial audit, we will check and update all software components of your Network System.

By providing a systematic quarterly check-up of your system we can head off problems before they begin and observe any degrading trends before they become a business disruption issue.

The Altara Network Assessment will provide routine preventive maintenance on both the hardware and software elements of your system. These system check-ups are vital to keeping your mission critical network infrastructure in peak operating condition.

Our advanced diagnostic tools will allow you to be prepared for new applications as they are introduced by giving you valuable capacity statistics which can be used to justify investing in upgrades or simply to give you peace of mind that your current system will be adequate.

Altara's goal is to be your partner. We want to give you the ability to maximize your infrastructure investment to achieve and surpass your business objectives.

What are the benefits of having a Network Assessment?

- A Network Assessment will give IT management a clear understanding as to whether the current design, architecture and network performance is meeting business requirements and needs.
- A Network Assessment will provide sound recommendations on how to overcome network issues and present a clear plan for moving forward.
- Above all, your company will benefit from having a recorded, in-depth analysis of the existing network infrastructure for future reference.
- The Network Assessment includes a deliverable that will give you a plan for solving the issues that we uncover during the discovery
- The network assessment will be used as a tool for Altara to be able to provide a customized support solution
- The assessment can be customized to provide information you may need to meet regulatory requirements such as SOX, HIPPA and GLBA.
